Scientific Interests: Organic Chemistry; Medicinal Chemistry; Glycosciences

He has been dedicated to the development of efficient synthetic approaches and methodologies towards new bioactive carbohydrate-containing molecules (*e.g.* sugar enones; sugar lactones; thio- and iminosugars; C- and N-glycosyl compounds, phosphorylated sugars; nucleosides; nucleotides and nucleos(t)ide analogs). The lines of research in which he has been focussed included the development of molecules of potential therapeutic interest for diseases such as cancer, Alzheimer's disease or bacterial infections, as inhibitors of relevant disease-associated enzymes or exhibiting innovative mechanisms of action. He has been particularly focused on medicinal chemistry of nucleos(t)ides.
