IV. Work plan

The objectives of the work plan are to model the role of dominance in cases with gene flow, specifically in models with hybrid incompatibilities, such that it is possible to jointly infer the demographic history of populations and detect and estimate dominance of hybrid incompatibilities, disentangling the genetic signatures of incompatibilities from other selective processes (e.g. introgression load and adaptive introgression). This will involve quantitative genetics and population genetics modelling, simulations, method development and data analysis. The work plan is included in Aim 1 (“Theory: Determine the genomic signatures of dominance in scenarios with gene flow”) of the funded project.
