SEMINÁRIO DE LÓGICA MATEMÁTICA

Dia 30 de Junho (sexta-feira), às 15:00, sala 6.2.33

Equational Hybrid Propositional Type Theory

Manuel Martins
(Universidade de Aveiro)

Abstract: Equational Hybrid Propositional Type Theory is a combination of propositional type theory, equational logic and hybrid modal logic. The structures used to interpret the language contain a hierarchy of propositional types, an algebra and a Kripke frame. In this talk we present a calculus for this logic that combines the axiomatics of its three components. The completeness proof is based on the three proofs Henkin published last century: (i) Completeness in type theory (ii) The completeness of the first-order functional calculus and (iii) Completeness in propositional type theory. The challenge was to deal with all the heterogeneous components in an integrated system.
