ANÁLISE E EQUAÇÕES DIFERENCIAIS

16 de Dezembro | 13h30 | sala 6.2.33

An equation with many interesting aspects

Ederson Moreira dos Santos
(Universidade de São Paulo – São Carlos - Brazil)

Abstract:

The Hénon equation, used for modeling some phenomena in astrophysics, is an excellent prototype for the investigation/introduction of some important problems on the qualitative analysis of solutions of elliptic partial differential equations. In this lecture I will address the following themes: The critical exponent for the Hénon equation; The symmetry of the least energy solutions; The symmetry of the least energy nodal solutions; The Morse index of radial nodal solutions; Some concentration phenomena.
